
Miniature Ball Screw

Miniature ball screw has the advantages of high mechanical efficiency, high precision and high durability. It can be customized, with different materials for deflectors and adjustable preload. Compared to other transmission machinery, hydraulic transmission, ball screw failure rate is very low. Repair and maintenance is also simpler, only the general lubrication and dust-proof is required. It can be applied for many special occasions and environment.

Miniature ball screw fascicule

We WKT produce miniature ball screw with high precision, low noise, good wear resistance. We have a full set of professional production equipment and matching precision testing equipment including internal thread grinder, external thread grinder, cylindrical grinder, turning&milling complex center, machining center, projector, dynamic measuring instrument, etc. We focus on producing miniature ball screw, custom ball screw, high speed ball screw, and bi-directional thread ball screw pair, as well as precision sliding lead screws.

The ball screw minimum diameter can be 4mm. Ball screw accuracy grade: C3, C5 or C7. We can produce the nut according to customer's application requirements. Both plastic and metal deflector are available. Metal deflector ball screw is often used to meet the application requirements of high temperature and corrosion resistance. It can greatly improve the ball screw's service life, stability and smoothness.

Our standard ball screw models are available in moderate amount of inventory, can be shipped in time. Custom ballnut are available upon request. The diameter of the precision miniature ball screw is from $\phi 4$ - $\phi 32$ mm, including 0401, 0601, 0602, 0801, 0802.5, 1002, 1002.5, 1003, 1004, 1202, 1202.5, 1203, 1204, 1205, 1210, 1602, 1603, 2002, 2003, 3202, 3203, etc. Our products are widely used in CNC machine tools, semiconductor equipment, automation equipment, medical equipment, petroleum machinery, precision measuring instruments, mechanical arm, laboratory equipment, aerospace, printing machinery, pharmaceutical packaging machinery, energy enterprises, beverage machinery, food machinery and other fields.

Adhering to the "professional, honest, efficient" business philosophy, we are determined to provide customers with the best products and best service.

Brief introduction of Precision Miniature Ball Screw

Precision Miniature ball screw assemblies are conventionally understood to be systems with a nominal diameter of 16mm or less. Their miniaturized nut geometries are achieved through the use of optimized recirculation systems with very small balls. These ball screws are usually not preloaded or only slightly preloaded to ensure the smoothest possible travel. Miniature Ball Screw is normally used in high precision equipments and apparatus.

We developed a special metal deflector to replace the plastic deflector. The metal deflector can improve the serving life, stability and smoothness. If the metal deflector is assembled together with the stainless steel screw shaft, nut and ball, the miniature ball screw can be used in the environment of high-temperature and corrosion.

Application of Miniature Ball Screw

- ◇ CNC machines: CNC machine centre, CNC turning machine, milling machine, EDM machines, grinding machine, wire cut EDM machine, CNC boring machine.
- ◇ Industrial equipment: printing equipment, automation machinery, textile machine, drawing machine, injection molding machine, paper processing equipment.
- ◇ Electronic machines: measuring robot, XY working table, medical equipment, SMT Equipment, semiconductor equipment, other automation equipments.
- ◇ Transport machinery: material handling equipment, elevated actuator.
- ◇ Others: antenna leg actuator, valve operator etc.

Features of Miniature Ball Screws

● High mechanical efficiency

Miniature ball Screws are fitted with steel Balls, providing rolling contact between the Nut and Screw Shaft, allowing for mechanical efficiency of over 90% and reducing the required Torque to less than one-third that of conventional Lead Screws. The design of the Ball Screws also allows linear motion to be converted into rotary motion easily (Fig. 1).

● Axial play

With conventional Triangular and Trapezoidal Screw threads, reducing the Axial play increases the rotational Torque due to the sliding friction. Screwtech Ball Screws, on the other hand, are very easily rotated, even without axial play.

● High precision

Screwtech Ball Screws are machined, assembled, and inspected using the technology of ultra-precision shaft Screw and Screw Gauge machining, under the temperature controlled room. High precision and accurate positioning ensure high reliability in use.

● Long service life

The Ball Screw movement results in virtually no wear, as the rolling-contact design, combined with the use of carefully selected heat-treated materials, results in an extremely low friction. This is the reason that high precision can be kept over long period.

The range of Miniature Ball Screw

The range of our miniature Ball Screws is from $\phi 4\text{mm}$ to $\phi 16\text{mm}$ as shaft nominal diameter. Maximum limit of overall lengths are shown below. Maximum limit of overall lengths will vary depending on the shaft end configuration, materials. Please inquire Screwtech for details.

Shaft nominal diameter	Accuracy Grade		
	C3	C5	C7
4	100	100	/
6	180	180	400
8	250	250	450
10	400	400	650
12	500	500	700
14	600	600	700
16	770	770	1000

Note: if required length exceeds the number in table above, please ask Screwtech representative.

Dust prevention

In Ball Screws, if dust or other contaminations intrude into the Ball Nut, wear is accelerated, the screw groove will be damaged, circulation will be obstructed due to Ball fracture, damage of recirculation parts and so on. Eventually, the Ball Screws will cease to function. Where the possibility of dust or other contaminant exists, the screw thread section cannot be left exposed, and dust prevention measure such as a bellows or Telescopic pipe must be taken.

Screwtech Miniature Ball Screws are concentrated on compact design for a feature of Miniature Ball Screw. Therefore, all models in the catalogue are the dimension without seals. Please inquire Screwtech if seals are required. Please note that Nut dimension may change due to seal installation. Some models cannot installed with seals.

Special Surface treatment

Surface treatment can be possible for the purpose of rust proof. Black oxide treatment is SCREWTECH standard surface treatment for the purpose of rust prevention. Please inquire SCREWTECH if other surface treatments are needed.

- Due to strict production management, film thickness can be treated equally and smoothness is kept.
- High anti-rust ability is possible.
